

WHAT YOU CAN DO

- ✂ Remove the bag from your lawnmower or use a mulching lawnmower. Leave the clippings to add organic matter and recycle nutrients, and avoid having to dispose of the grass clippings.
- ✂ Do not put yard waste on the curb the Town of Rye does not have curb side collection of any kind.
- ✂ Drop off your yard waste at the Rye Transfer Station at 309 Grove Road for composting. Call 964-5300 for more information.
- ✂ Start backyard composting (away from surface waters). See: https://www.des.nh.gov/organization/divisions/waste/swrtas/documents/compost_flier.pdf for a free “how-to” brochure.
- ✂ NEVER dispose of leaves or clippings in or near storm drains, drainage channels (where water drains rain or melting snow), wetlands or waterbodies!

OUR COMMUNITY CARES

Our community cares about clean water and is doing its part to help prevent water pollution in local waterways. This outreach message helps our community meet US Environmental Protection Agency (EPA) requirements to share pollution prevention information with its residents.

WHY DOES IT MATTER?

You Choose - *your leaves and grass clippings can be a valuable resource OR a source of water pollution.*

As a resource . . . **GOOD**

Mulched leaves or grass clippings on your lawn add valuable nutrients and organic matter.

Grass clippings provide a source of slow-release nutrients reducing the amount of lawn fertilizer needed by at least half or none. A thin layer of leaves will break down and add much needed organic matter to plant beds.

Composting leaves and grass clippings save money.

Compost is natural recycling. Compost can be used as a top dressing on your lawn or garden beds reducing or eliminating the

As a source of water pollution . . . **BAD**

Decaying leaves and grass kill critters in streams, rivers, lakes, ponds, and wetlands.

Leaves and grass clippings decompose in water and wetlands by using the oxygen that other organisms such as dragonfly larvae, crabs, and fish need to live.

Yard waste on stream banks smothers natural vegetation.

Leaves or grass dumped near banks, shorelines and wetlands block sunlight and smother the natural plant life that provide food and cover to animals such as turtles, ducks, chipmunks, and deer.

Yard waste dumped near waterbodies contributes to stream algae and odors.

Seepage from yard waste piled on or near banks and shorelines will slowly make its way into the water. Algae then grow and form foul-smelling, green mats on the water surface.

Yard waste dumped in or near wetlands or surface waters is against the law!

In an effort to protect wetlands and surface waters, the NH legislature passed a law that prohibits filling streams and wetlands with waste
